# WolfJobs

## Finding jobs made easy!

## Flow Chart

## Introduction

- WolfJobs is a platform that connects students with short-term and full-time job opportunities.
- Offering personalized job matching, resume uploading, and easy application tracking, it simplifies the job search.
- With features like advanced job filtering and real-time notifications, WolfJobs ensures that students find roles aligned with their skills and career goals, helping them grow both personally and professionally.

## User Workflow

- Users can create an account or log in as a student or manager using their credentials.
- Students complete their profile by adding skills and uploading their resume.
- Managers create job postings and provide details like pay, city, and job type.
- Students browse job listings and apply to those that match their qualifications.
- Resumes are parsed and stored in MongoDB for manager review.
- Students track their application status in the portal and receive notifications for updates.
- Managers review, filter, and manage applications, accepting or rejecting candidates as needed.
- Both students and managers are notified of updates, such as application status changes or interview requests.

## Future Enhancements

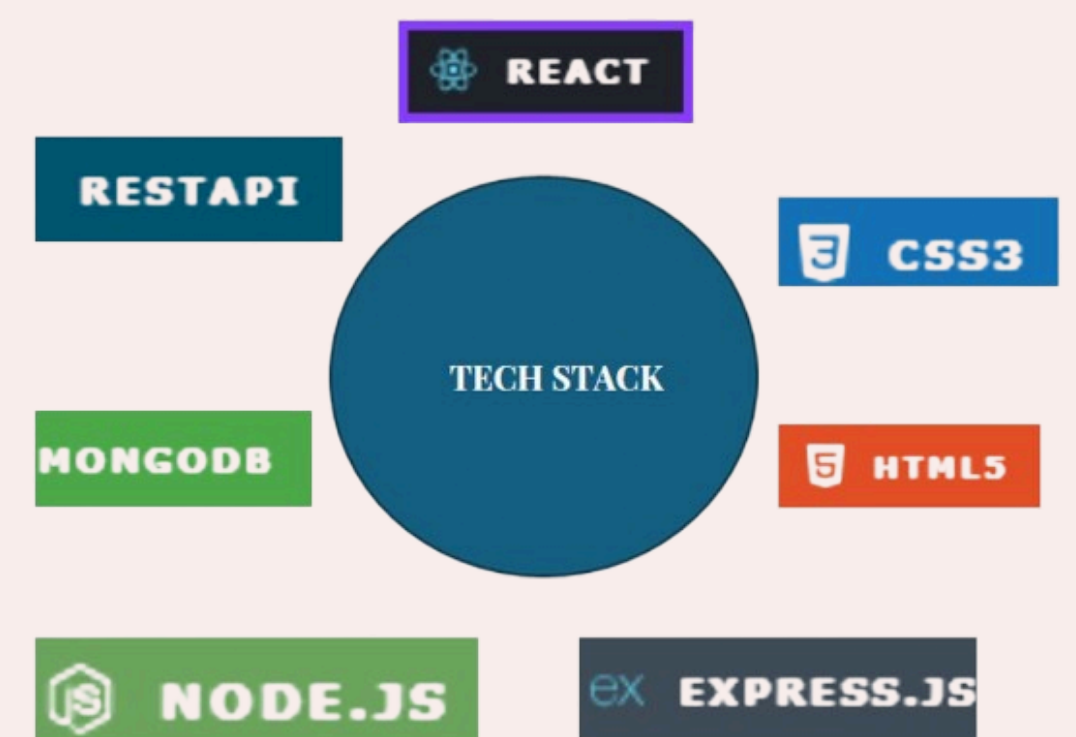

- Email notification system to inform applicants when their application status changes (e.g., selected, rejected).
- Improve user security by hashing passwords before storing them in MongoDB.
- Add a feature that displays a match percentage for job applicants based on their skills and the job requirements.
- Add a new type of user—University Admin—with permission to manage and oversee both students and hiring managers.
- Incorporate high-quality images and engaging visuals to enhance the attractiveness of the homepage and other key sections.
- Make the user interface more intuitive and create a more interactive experience for users.
