

WolfJobs

The Ultimate Hub for On-Campus Student Employment

Group 88 - Avik Dube, Bharadwaj Katna,
Srinivasa Karthikeya Reddy Kovvuri

Introduction:

The job market for students seeking short-term roles lacks dedicated platforms, as traditional portals overwhelm users with permanent listings and complicate applications with inconsistent formats and poor job matching. The WolfJobs job portal aims to connect the student fraternity with the recruiters for both temporary and full-time job openings. The different recruiters can post temporary jobs, for which candidates apply without bothering about permanent associations.

Future Enhancements:

- **Job Filters by Role:** Users can filter jobs for part-time, full-time, co-op, and internship opportunities.
- **"Save Job" Tab:** Provide a tab where users can save a particular job in their account for easy access later.
- **Enhanced Manager Profiles:** Expand the manager profiles to include more fields of information
- **Location-based filters for filtering job searches:** Will allow users to search for work in a place of their choice so that the opening is relevant to them.

The screenshot displays the WolfJobs web application. On the left, there's a sidebar with navigation links: 'WOLFJOBS', 'My Applications', and 'All jobs'. The main content area is divided into two sections. The top section, titled 'NC STATE DINING', lists four job openings. Each entry includes the role, job status, type, and application status, along with a salary range. The bottom section, titled 'Job Details', provides a detailed view of a specific job. It includes the role, job status, type, location, and application status. Below this, there's a 'Description' field and a 'Fill Questionnaire' section with four questions: '1. name', '2. age', '3. dob', and '4. hobbies'. Each question has a corresponding input field.

What's New?

- **Seamless Resume Upload and Parsing:** Facilitates easy resume submissions,
- **Precision Application Matching:** Analyzes all the profiles to match candidates with vacant positions.
- **Improved Job Sorting and Search:** It allows one to sort by pay, location, and type for easier searching.
- **Notifications Tab:** Informs candidates about the status of their candidature in due course.
- **Enhanced User Experience:** The intuitive design and functionality is more user-friendly.
