

Your One-Stop Price Hunter Across the Web!

## WHAT IS SLASH?

It is an openly accessible Web API framework, which scours ecommerce websites, to provide the best prices on items across multiple online shopping destinations.

## WHY SLASH?

### Best Deals at Your Fingertips:

Slash streamlines online shopping by instantly comparing prices from multiple e-commerce sites, ensuring that users find the best deal without the hassle of browsing countless websites.

### Ratings and Reviews Filter:

With Slash, users can filter products based on ratings, helping them make informed decisions by prioritizing quality alongside cost.

### Global Price Comparison with Currency Conversion:

Slash's currency conversion feature ensures users can see product prices in their home currency, making cross-border shopping simpler and more transparent.

### Time and Money Saver:

In the highly competitive e-commerce market, Slash eliminates the guesswork of finding discounts and price cuts, helping users save both time and money on every purchase.

### User-Friendly, All-in-One Solution:

Slash combines a smooth user experience with advanced features like price filtering and product rating sorting, making it the perfect tool for both casual shoppers and deal hunters alike.

## FUTURE MILESTONES

**Price Drop Alerts:** Add a feature where users can set alerts for specific products, notifying them when the price drops below a certain threshold, ensuring they never miss a great deal.

### Advanced Sorting and Filtering Options:

Expand the filtering options by adding categories like shipping speed, seller ratings, and return policies to allow for more refined product searches.

### Product Availability Notifications:

Offer real-time stock and availability updates for popular items, notifying users when out-of-stock items become available again or if a product is running low.

**UI Redesign:** Implement a cleaner, intuitive, and responsive user interface across devices for a smoother experience.

### Personalized Dashboards:

Develop personalized user dashboards that visually track price drops, wishlist items, and product recommendations with graphs and charts.

Up to 22 test cases! Including API tests for data from e-commerce websites, overall data tests along with text and number format tests
