Improvements!

- **Login Page:**
 - Users of the application are now greeted with a sign-in page, or may choose to continue as a guest.
- **Saved Reviews:**
 - Users can rate their favorite (or least favorite) movies out of ten possible points, as well as write brief comments to document their thoughts.
- **The Wall:**
 - Users can view all of their movie reviews and ratings at a glance in a visually appealing dashboard.
- **Friends:**
 - People are often interested in what their friends are watching. As long as users are friends, they are able to see what they have reviewed.

Milestones

- **Milestone 1:**
 - Rework the frontend to use React or Angular.
 - Increase the number of test cases from 5 to as many as you would like!
- **Milestone 2:**
 - Continue to improve user profiles, Features such as messaging could be implemented.
- **Milestone 3:**
 - Enhance the recommendation engine with better Machine Learning models.
- **Milestone 4:**
 - Integrate popular streaming services to provide seamless access to the recommended movies.

Test Cases: 5
