Workflows

The workflows on the WolfJobs platform are designed to make it easy for users and managers to complete their tasks.

Manager Workflow	User Workflow
<ul style="list-style-type: none">Managers log in to access administrative features.They can create, view, and update job postings.Managers review applications submitted by users.Once finished, they log out.	<ul style="list-style-type: none">Users log in to their accounts.They search for jobs using filters like location and skills.Users can either apply for a job immediately or save it to a wishlist for later.After completing their activities, users log out.

Future Scope

Real-time Notifications and Alerts	Interview Scheduling Integration	Analytics Dashboard for Employers	Two Factor Auth
Integrate push notifications or email alerts for key events such as job application submission, status changes, interview invitations, etc.	Allow recruiters and applicants to schedule interviews directly through the platform, integrating with calendar systems (Google, Outlook, etc.) to streamline the hiring process.	Provide a dashboard where employers can see metrics like the number of applicants, average applicant qualifications, time to fill the position, and diversity metrics. This can help managers make data-driven decisions.	To enhance security, introduce two-factor authentication for users, especially for managers and recruiters who have access to sensitive information.
