

# WOLF LEASE

subleasing made easy

- WolfLease is an application to help people find Apartments offering rooms on sublease and move in faster!
- WolfLease allows us to search for flats based on location, facilities, sublease start and end dates, etc.

Enhancements in the current version compared to previous versions:

**Frontend Implementation:** AngularJS was used to build an interactive, user-friendly interface.

**Docker Integration:** The application is now containerized for scalable and reproducible deployments.

**Authentication and Authorization:** Users can now create accounts, login, and manage profiles.

**Code Validation and Cleanup:** The unnecessary fields were removed from the models, and additional validation checks were added to ensure robust functionality.

**Search Functionality:** Users can search for apartments, leases, flats, and users based on various parameters like location, rent, lease dates, etc.

## Proposed Improvements for WolfLease:

**Improvements in UI:** Enhance the interface to be more intuitive and visually appealing, making navigation easier for users.

**Separate Login for Applicants and Owners:** Create distinct login portals to offer customized features and experiences for applicants and property owners.

**Adding Images for Houses:** Allow owners to upload house images, making listings more attractive and informative for potential renters.

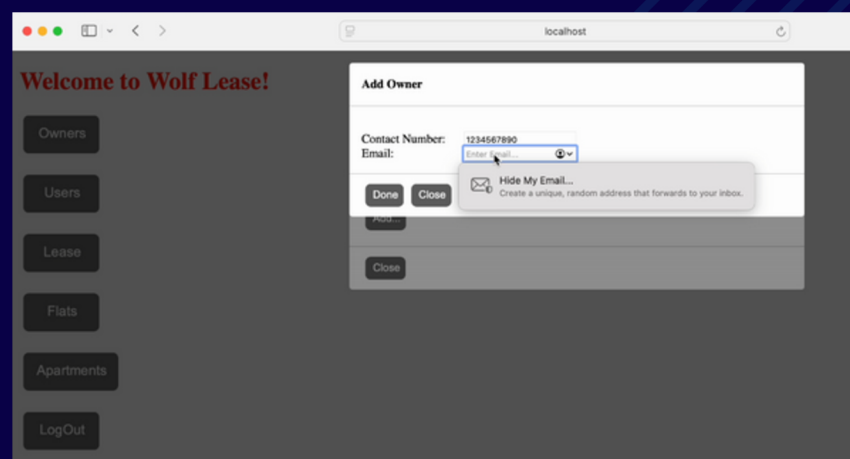

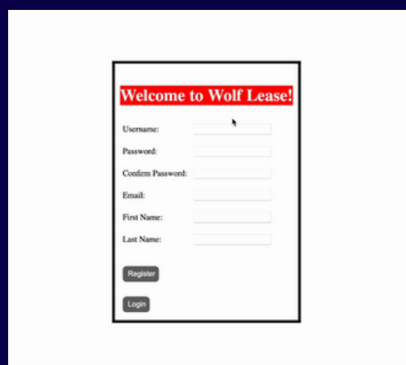

**Activities Around the Place/House:** Highlight nearby activities and attractions to give applicants a better sense of the surrounding area.
