What is SplitIT?

Have you also spent a considerable amount of time trying to split expenses with friends and family? Who hasn't!

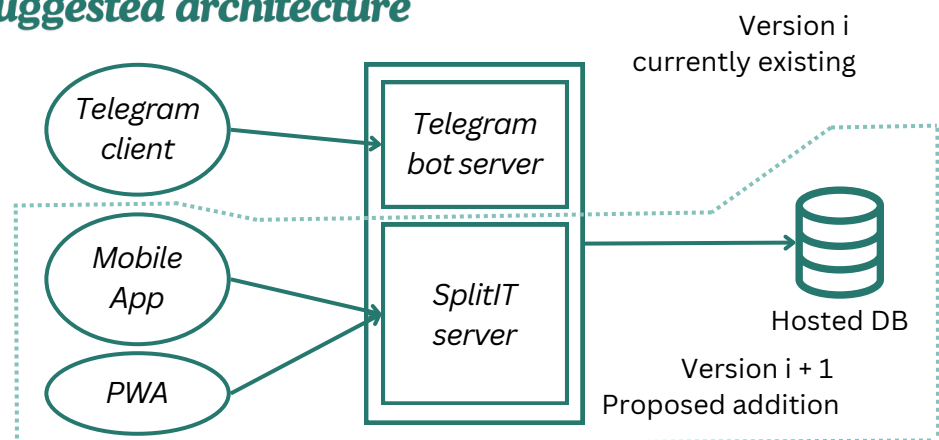

SplitIT (formerly MyExpenseBot) is a telegram bot that can simplify splitting shared expenses on the go with a ton of intuitive budgeting and analytics features.

With SplitIT, users can add friends, create groups, manage shared expenses, analyse spending patterns, and keep track of their expenses.

How can we make it better?

- **Addition of UI** - using multiple commands to add a single expense can get cumbersome, a UI can make the process intuitive
- **Elimination of telegram dependency** - with a PWA, the end users won't need to download telegram to use the bot
- **Multi-device sync** - currently the files are stored locally, with the introduction of a hosted database users would be able to add expenses using their current device of their choice, all in sync!
- **Unequal expense split** - an expense could be split by shares, or as granular number inputs depending on the actual spending
- **Receipt scanning support** - no need to manually calculate and split expenses with a ton of items, with this feature users would be able to click a picture of the receipt and select the shares per user, the SplitIT does the rest
- **Payment reminders** - settle up reminders to friends

Who are we?

Tired of applying to countless on-campus Jobs without any response? Confused about which role would be better suited for you? Don't know what to expect? Then UnityJobs is your go-to place for landing the perfect job without ever leaving campus!

UnityJobs is a on-campus Job portal designed specifically for students which provides students a platform for discovering and securing employment opportunities.

Whether you're looking to earn some extra cash, gain experience, or just find a cool job to fit around your classes, we've got you covered.

How can we make it better?

- **Job Application Tracking** - Add a feature where students can track the status of their on-campus job applications, receive notifications for updates, and view upcoming deadlines for job applications.
- **Job Skill Tags** - Allow users to tag jobs with skills (like communication, coding, customer service), helping others identify which roles help develop specific skill sets.
- **Advanced Search and Filters** - Implement more detailed search filters (like department, job type, difficulty, time commitment, etc.), so students can easily find jobs that fit their criteria. This would streamline the job search experience.
- **Email Notification Alert** - Enable email notifications for job application updates, new job postings, and responses to reviews, keeping users informed and engaged.
