MONEY MANAGER

What's it?

Money Manager is a simple yet powerful Telegram bot that helps users manage daily expenses with ease. Designed for local use, it enables users to log spending, track history, set budgets, and add recurring expenses, all through intuitive commands. The bot supports multiple currencies, provides alerts for low balances, and offers dual account management for checking and savings accounts. With features like CSV/PDF export, data visualization through graphs, and detailed user studies, Money Manager streamlines financial tracking, making it easier to manage and analyze personal finances on the go.
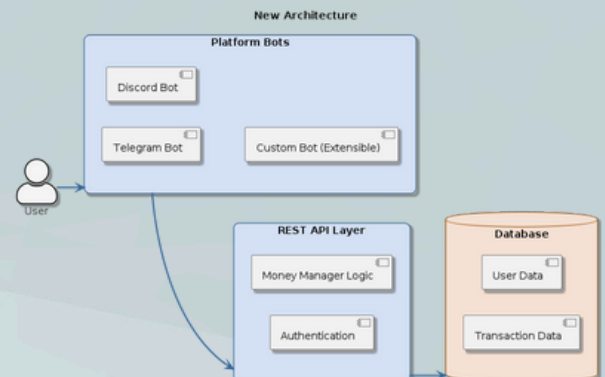

Coding Arsenal

We promise ...

- **Cross-Platform Synchronization:** Enable users to access their financial data seamlessly across multiple platforms, such as Telegram and Discord.
- **User Authentication:** Implement secure login mechanisms to protect user accounts and personal data.
- **Custom Alerts and Notifications:** Integrate customizable notifications via email for weekly and monthly summaries, as well as personalized alerts for significant financial events.
- **Group Expense Tracking:** Allow users to create groups for shared expenses, enabling multiple participants to manage and contribute to group financial activities.
- **Additional Features:** Include a currency converter, enhanced visualization options, predictive analytics for spending habits, and capabilities for exporting and importing expense history.

How's it?

- **Maintain two types of accounts:** Manage both checking and savings accounts separately. Helps track daily spending and long-term savings.
- **Change type of account before a purchase:** Switch accounts before spending. Prevents using the wrong account for purchases.
- **Log expenses and balances in multiple currencies:** Track spending in different currencies. Ideal for international transactions and travel.
- **Add or update budget in multiple currencies:** Set budgets by category in different currencies. Simplifies managing finances across countries.
- **Get alerts when balance is low:** Receive notifications when the balance drops. Prevents overdrafts and financial issues.
- **Get errors for overspending:** Error message appears when trying to overspend. Helps users avoid exceeding available funds.
