WOLFJOBS

GITHUB   DEMO

WOLFJOBS

ABOUT

- **Pack Jobs simplifies the job application** process for both **recruiters** and **candidates** !
- It allows recruiters to post jobs, track screening rounds, shortlist candidates, and manage their progress.
- Candidates can apply, answer questions, and track their application through each round— **all on one platform.**

WHY WOLFJOBS?

- **Precise Job Matching:** Our system matches applicants with jobs based on skills, helping you find positions that perfectly align with your qualifications.
- **Resume Upload:** Applicants can easily upload resumes, while employers view them in PDF format.
- **Enhanced Job Sorting & Search:** Filter jobs by pay, city, or employment type, and search for specific roles.
- **Notifications Tab**: Stay updated with real-time notifications on your application status.

THE TECH

- **MongoDB**: NoSQL database for flexible, scalable data storage
- **Express**: Minimalist web framework for efficient server-side routing.
- **ReactJS**: A powerful library for building interactive user interfaces
- **NodeJS**: Event-driven runtime for high-performance, scalable applications.

30+ Test Cases Spanning Backend + Frontend

- Backend API Endpoints Tests
- User Authentication Tests
- Frontend Component Rendering
- User Actions - Job Flow Tests
- Page Rendering Tests

FUTURE SCOPE

- **Job Status Emails** ✉: Applicants receive automatic emails upon selection or rejection, ensuring clear communication.
- **Interview Scheduling** 📅: Managers and applicants can organize interview times via Google Calendar integration.
- **Video Interview Submissions:** Managers can request video submissions, and applicants can easily upload videos via the portal.
- **Chatbot Integration** 🤖 – A chatbot to enhance user experience, guiding them through platform features.
