EVOLO

Evolo is a comprehensive project management system designed to streamline team collaboration and task tracking within organizations.

The primary objectives of the application are to simplify group project management, enhance team communication, and provide a centralized platform for task assignment, monitoring, and submission.

Evolo aims to address the challenges of working in teams by offering a user-friendly dashboard-based interface that caters to both project administrators and regular users.

FEATURES

- Task assignment with deadlines
- Team member management (addition and removal)
- Periodic deadline reminders
- Task submission platform
- Review and feedback system
- Organization-specific project views
- User profile pages
- Password strength and email/contact validation during signup
- Project configuration and customization for administrators

TECH STACK

MONGODB	EXPRESS JS

NODE JS	REACT JS

Future scope

1. Migrating the frontend to Next.js for improved page load speeds and enhanced performance

2. Implementing a real-time collaboration feature, allowing team members to work on documents or tasks simultaneously

3. Integrating artificial intelligence for task prioritization and workload balancing suggestions

4. Developing a mobile application to provide on-the-go access to project management features

5. Enhancing the UI/UX design to improve user engagement and accessibility, potentially incorporating customizable themes and layouts
