BURNOUT

- BurnOut is a wellness application designed to help users manage their daily calorie intake and expenditure as well as suggests workout routines that will help the user to maintain a good health.
- This all-in-one wellness application has user-friendly calorie tracker and offers a comprehensive suite of tools to support individuals in achieving their fitness and weight management goals.

TOOLS USED

Comprehensive Testing with 16+ Automated Test Cases
ENHANCEMENTS

- The enrollment lists of users for all the courses are displayed to keep a count of users who are being active as well as encourage other prospective users to join a course.
- An email is sent to users who have logged in to ensure that the right person has logged in and not a hacker.
- Two-Factor Authentication is implemented to enhance account security.
- An additional section that suggests diet recipes and ingredients is added.

FUTURE SCOPE

- Integration with wearable devices like apple watch and pixel watch which promote health consciousness.
- Community forums and discussion boards where users can discuss about their workout routine, and diet.
- Multi-language support so that users from all around the globe can utilize the wellness application.
- Sleep tracking where users can log and monitor their sleep patterns, including duration and quality.
